PROFESSIONAL SUMMARY

Computer Science undergraduate with strong interest in Game Development, Linux System Administration, and Full Stack Web Development. Experienced in C++, Unreal Engine 5, Linux server configuration, Front-end development. Passionate about building scalable systems, optimizing performance, and solving real-world technical problems.

EDUCATION

B.Tech in Computer Science Engineering (Data Science)

Raghu Institute of Technology, Visakhapatnam

CGPA: 7.48

TECHNICAL SKILLS

Programming Languages: C++, JavaScript, Python, C

Web Development: HTML5, CSS3, React.js, Axios

Game Development: Unreal Engine 5, C++ (OOP), Blueprint Scripting, Multiplayer Networking, AI Behavior, Collision Systems

Networking: TCP/IP, OSI Model, Socket Programming, LAN/WAN Basics, Packet Analysis, Multiplayer Protocols (UDP/TCP), Network Troubleshooting

Networking Tools: Wireshark, Ping/Traceroute, Netstat, iptables, tcpdump, nmap

Linux System Administration: Ubuntu Linux, Bash Scripting, SSH Configuration, User/Group Management, File Permissions, Process Management, System Monitoring

Databases: MySQL, PostgreSQL

PROJECTS

ASHER GROUP Static Business Website | HTML, CSS, JavaScript

- Developed a modern responsive business website for **ASHER GROUP** using **HTML, CSS, and JavaScript**.
- Implemented a premium fintech-inspired UI with responsive layouts, glassmorphism effects, smooth animations, and mobile-first design principles.
- Designed and structured multiple service sections including **Insurance, RTO Services, Banking, Solar Rooftop Solutions, and Online Services**.
- Integrated interactive features such as WhatsApp contact integration, animated service cards, hover effects, sticky navigation, and smooth scrolling.
- Optimized the website for performance, readability, SEO, and cross-device responsiveness while maintaining a clean and professional user experience.

Spaceship Warfare | Native C++, SFML

- Developed a 2D space shooter game using **Native C++, SFML, Box2D, and CMake** without using any game engine.
- Implemented core gameplay systems including player movement, enemy mechanics, collision detection, and projectile systems using Object-Oriented Programming principles.
- Designed a Game Design Document (GDD) covering gameplay mechanics, combat systems, and technical architecture.

Linux Server Setup and Secure Remote Access | Ubuntu, Bash

- Configured an Ubuntu Linux server with secure SSH remote access and managed users, permissions, and system services using command-line tools.
 - Automated administrative tasks using Bash scripting and monitored CPU, memory, and disk usage to maintain system stability and performance.
-
